

HECR

'EVMS CARTRIDGE SEAL'
SPECIFICATION SHEET

- **Bolted Cartridge Seal**
- **Unbalanced**
- **Replaceable Component Seal**
- **Suits Ebara EVMS Pumps**

HECR replaces the unbalanced bolted-in cartridge seals fitted to newer Ebara EVMS - Vertical Multistage pumps rated up to 16 MPa maximum working pressure.

HECR is supplied with a pre-assembled PTFE wear ring which eliminates the need for any separate setting tabs.

► Refurbishment

As per the original Ebara design, the cartridge seal utilises a replaceable internal component seal, making a cost-effective refurbishment option viable.

We are able to refurbish existing units, including genuine OEM parts. Contact us for more information.

► Materials

SiC/SiC/V
